Football in Every Room of the House

Get ready for next year's FIFA World Cup™: maximize your HD experience with the Philips Showline Media Center (MCP9350i).

For maximum enjoyment of HD football home entertainment, fans can include the Philips Showline Media Center (MCP9350i) to their equipment. The Philips Showline Media Center connects to your home theater system using a choice of different standards - and future interfaces such as DVI to HDMI to enjoy full HD experience, Wi-Fi wireless connectivity or analog connections. Additionally, it allows users to stream a variety of music, video and Internet content anytime and anywhere in the home.

Like other products in Philips' lifestyle-enhancing range, the MCP9350i is also HD-ready, with high-definition video playback capabilities and high-definition digital interfaces that make it the perfect companion for Philips' HD FlatTV range. Watching a football match will be more convenient thanks to the implementation of Philips Digital Natural Motion which produces smooth, judder-free viewing images.

The Showline Media Center's 250-gigabyte internal hard disk provides enough storage for your favorite 2006 FIFA World Cup™ games and highlights. For even greater flexibility and convenience, two integrated TV tuners allow fans to watch a match on one TV channel while recording another.
